### **Abstract**

In the of this study biological efficiency of the baculoviral preparation Virin-HS-P in combating *Helicoverpa armigera* on tomatoes was estimated. Virin-HS-P preparation testing for *Helicoverpa armigera* of II generation development control on tomatoes was carried out at a rate of 0,15kg/ha. The biological efficacy constituted 85,2% in comparison with chemical etalon Actara with a biological efficacy of 92,6% under the same conditions.

**Key words:** ecology, baculoviruses, viral preparation, *Helicoverpa armigera*, biological efficacy.
