### **Abstract**

During crop vegetation the winter rape may be challenged by a complex of pests. Integrated protection of winter rape requires the use of complex measures. Chemical control of polyphagous pests to different cultures is provided by a large number of insecticides and winter rape culture require a much larger study. In complex integrated pest winter rape in Moldova are admitted about 10 to 12 insecticides. But plant protection practice in recent decades has shown that the composition of plant protection products must be constantly renewed. Proceeding from the above, the purpose of research is studying the biological effectiveness of insecticide Kaliber 200 SC in combating pests rapeseed complex.

**Key words:** *rape, pests, testing, insecticides*
