

Reconstrucția ecologică a haldelor de steril din cariera Husnicioara-Mehedinti

R. MOCANU, Ana-Maria MOCANU, M. SUSINSKI - Universitatea din Craiova

The steril dumps from the Husnicioara quarry (district Mehedinti) have physico-chemical stills wich are not favorable to the plants cultivation and development. An important role in the ecological reconstruction of the dumps it have the ussing of fertilizers. After the utilization of fertilizers with N64N120 or fond of P64 we can cultivated maize, sunflower and wheat. The dunk application and moderate doses of fertilizers as well as the cultivation of steril dump with alfalfa improves the agrochemical skills of steril dump.
