

Cercetari privind studiul variabilitatii fenotipice la câteva biotipuri de fasole pentru pastai obtinute din soiul atlantic

C. LEONTE, Gh. TARDEA, Violeta SIMIONIUC, D. SIMIONIUC, M. CALIN - USAMV Iasi

The experiment was made with five forms from Atlantic variety, with definitely growth and green shell bean. The purpose of the experiment is to study the phenotypical variability at the next quantitative characters: height of plants, number of branches, number of pods, length and breadth of pods, number of seeds on plant and pod, weight of seed on plant and pod and weight of 1000 seeds.
