

## Exploitation indices for the pp-3-30m and p-2v plows, working on sloped grounds

P. SUDITU - USAMV Iasi

In order to make a complete analysis of the P--2V plow working process, `n comparison with the PP-3-30M plow, we have developed some tests of the abovementioned plows on sloped grounds. This study is imposed by the fact that aprox. 46 % of Moldavia's arable land consists of sloped grounds; in Iași, Botoșani and Vaslui counties, the slope soils represent 49 - 69 %. The aim of this paper is to determine the main exploitation indices of the above mentioned plows, on grounds with 0 ...100 transversal slope.
