

Poluarea unor ape freatică din zona limitrofa Craiovei ca urmare a exploatarilor petroliere

Ana Maria MOCANU, M.SUSINSKI - Universitatea din Craiova

The underground water from the limitrophe area of the oiler exploitation wich are very near from Craiova, are polluted with salted waters. Index: fixed residue, chloride, sodium, calcium, magnezium, hardness, phosphate, sulphates, are over of 5-10 times to pretability valves. Fixed residue is 19760 mg/l chloride concentration: 9319 mg/l, sodium concentration is 4358 mg/l, calcium 500-1000 mg/l, magnezium 300-400 german degrease. Thise underground waters have very high hardneses, some of them being at 300-400 german degrease.
