

Contributii la evaluarea capacitatii de productie a pajistilor de *Agrostis capillaris* din regiunea de deal a Olteniei

I. IONESCU, M. OSICEANU, M. COLA - Universitatea din Craiova

In order to determine the production capacity of the meadows from the hilly area of Oltenia, research was done in the following localities : Cărpiniș, Cernădie, Bumbelți - Pîjic, Polovragi and Preajba. The studied meadows are taking part of the *Agrostis capillaris* type, with a pastoral value 2,39 - 2,85, allowing a 0,61 - 1,00 UVM / ha load and can be introduced in the " medium " and " mediocre " category. There are necessary technical improvement works.
