

## Cercetări privind geneza și principalele proprietăți ale unor soluri acide din nordul Olteniei

POPESCU C., BECHERESCU C., VASILE D., ȘTEFAN M. - Facultatea de Agronomie Craiova

The most encountered acid solis from Northern Oltenia are represented by the brown luvic soli and the luvisol albic, located in the hilly zone and high piemont and the brown acid and podzols located in the mountain zone. These soils are scarce in humus and nutrients and they have an acid and very acid reaction. In order to be cultivated, they need radical improving measures.
