

Cercetări privind cultura viței de vie pe haldele de steril

Ana Maria MOCANU, M. SUSINSKI - Universitatea din Craiova

We taken in study seven variety of vine. From all this variety only Merlot, Italian Riesling, Regal Feteasca we obtained higher production in comparation with the medium production, we obtained an efficiency of 135% and 130%. The production quality from the sugars contain and must acidity show us that the crop conditions on the steril dump, the vine maturity achieved normal.
