

Cercetări privind folosirea unor culturi de leguminoase în ameliorarea haldelor de steril

MOCANU R., Ana Maria MOCANU, SUSINSKI M. - Universitatea din Craiova

The steril dumps from the Husnicioara quarry-Mehedinti district have physico-chemical properties which are defavorable for development and growing plants crop. An important part in improvement these properties it have the vegetable plants crop. The experiments mode on this steril dumps with a sort of vegetables plants alfalfa, peas, peanuts show us that all this crop are good even if we didn,t use fertilizers. The best results we obtained at the alfalfa crop and a higher production of hay 5575 kg/ha.
