

Cercetări privind proiectarea și realizarea unei linii tehnologice de procesarea florii soarelui, destinată fermelor agricole mici

ȚENU I. - Universitatea Tehnică "Gh. Asachi" Iași

For the processing of the sun-flower seeds, it has been designed and achieved a technological line of small capacity which includes the following machinery: separator-peeler, power press for the extraction of the oil and plate filter. The tests effected on laboratory and exploitation conditions has followed the optimization of the operating of technological line.
