

Die landwirtschaftliche kooperation in Dänemark

R.A. MORARU, D. DONOSA, G. UNGUREANU, S. BREZULEANU - USAMV Iași

The current condition of the Rumanian agriculture, having as predominant the familial agricultural farms of average size of 2-3 ha imposes the promotion of the associative forms and the organisation of economically viable enterprises. In this paper the authors intend to introduce the way in which the Danish farmers have organised themselves in co-operatives, how and in which conditions function the Danish agricultural co-operatives. Some statistical data, as the total number of co-operatives, the number of the members, the market shares etc., are also presented. Taking into consideration the fact that the major reason for the strength and success of the Danish agriculture is the collaboration of the farmers, the authors consider that the Danish system might be a model for the Rumanian agricultural cooperation.
