On the preliminary general land-survey data regarding the surface, the category of land use and owner, there are recording subsystems of the land survey speciality, from which we can mention: agricultural land-survey, forest land survey, water land . survey, road land .survey and others. Winegrowing, land-survey constitutes a branch of agricultural land survey, which is organized on the afferent lands of the national winegrowing patrimony, no matters their destination and owners. By introducing the economic, technical and juridical unitary system of winegrowing real-estates it is created a primary database. For a qualitative evaluation of winegrowing lands there was achieved a cadastral improvement of an area from .Vasili Adamachi. Farm, from Research Station . Iasi due to some pedological, climate, land . form and hydrological conditions.
