

Distribuția perilor glandulari de pe organele vegetative și de reproducere la *Hyssopus officinalis*

Irina TOMA, GOSTIN, C. TOMA - Universitatea "Al. I. Cuza" Iasi

The rate of initiation and the progressive development of glandular hairs are considerably different in different regions of Labiatae.s leaves. That depends to the differentiation of tissues from the foliar lamina constitution (Werker and colab., 1985). In consequently, the developmental stage of glandular hairs has an important influence of the composition of volatile oil produced by them.
