

Studies on regarding the resources for growing of bee honey production into basin of Slănic river - Department Buzău

A. CAIA, M. CALOIAN, O. CALOIAN, M. DOLIȘ, Margareta CONFEDERAT - USAMV Iași

Following the study done regarding the melliferous fund from the localities of Slănic basin, have results that the bee yield can increase at least 50 % compare with actual situation. The high economic efficiency of the bee production and for other bee natural production can contribute to substantial increase of inhabitants income from region, which in general has few financial resources.
