

L'influence de l'accumulation Stânca-costești sur le mode d'évacuation D'engorgement en eau dans l'aménagement Albița-fălciu

Cornelia BĂLĂCEANU - I.C.I.T.I.D. Băneasa-Giurgiu

A problem which present an important interest in the hydroameliorative activity is to save, to reduce the energy consumption in the development exploitation of irrigation or of moisture excess control activity. In this paper it is presented a study of the discharging possibility without pumping of the collected water from the draining-drainage net of the multipurpose project Albița-Fălciu, within the conditions of regularization of the runoffs on Prut river, through Stânca-Costești storage.
