

Research on the water consumption in wheat crop in the Suceava plateau

C. SAICU - Agricultural Research Station Suceava

M. MICU - University of Agricultural Sciences and Environmental Protection Sibiu

The paper present the experimental results concerning the water consumption in winter wheat in the natural and irrigated conditions. The results were obtained during years 1975-1999. We refer to the monthly and total water consumption, to the water utilization coefficients and the water supply sources.
