

Contribution on the vegetation study of *Artemisietea vulgaris* class, within the Iași vineyard

C. SÎRBU - USAMV Iasi

The paper presents some halfruderal phytocoenosis dominated by *Bromus inermis*, and included in the *Convolvulo-Brometum inermis* Elia. 1979 association. We have identified this associations, which didn't cite for our country till now, on the taluses of terraces from Bucium, Șorogari and Uricani vine center (Iași vineyard).
