

## La transposition didactique dans l'enseignement superieur

STANCIU M. - USAMV Iași

The paper intends to draw the attention of the Romanian Pedagogy world upon some significant researches carried out by the contemporary didactics. The accent falls mainly on the evolution of this concept, the stages and processes through which one passes from the academic, somewhat rigid to the directly applied science at different levels of the education system. The contribution of the paper consists in the peculiarities of the didactic transposition in the academic education system (as a science generating institution, also shaping and forming the future specialists).
