

## Remarks in the appreciation of several weeds from crops as medicinal plants

T. ROBU, Liana Doina TOMA, Doina JITĂREANU – USAMV Iasi

In spontaneous flora of Romania there are many species that are used as medicinal plants. A major part of these plants can be meet in the crops as weeds. In this work the mains weeds with therapeutic properties from crops are presented. An image is presented for each species, as well as the main properties and uses for some illnesses. This work also presents some technics of uses for these plants.
