

Variability of the productivity index at Fetească neagră grape vine variety

Silvica PĂDUREANU - USAMV Iasi
Mihaela TUDOSE - Biological Research Institute Iași

The researches aimed to point out the variability of the productivity index at Fetească neagră grape vine variety under clonal selection. The estimation made over a period of 6 years showed the variability limits of this important parameter from a viticultural point of view, at the biotype level, and at the level of clonal elite as well.
