

## Haldele de steril provenite din exploatarea la zi a lignitului, impactul asupra mediului, măsuri de reconstrucție ecologică

R.MOCANU, Ana Maria MOCANU, M.SUSINSKI - Universitatea din Craiova

The mining operation have a pregnant influence on the environment have a through forme and varied modality affecting almost all factors of environment aer, water, health, flora, fauna, lanscape, human location, the cultural patrimony and agriculture. The most important impact on the agriculture it produced by the mining operation, and it affected the productive area for a period of 15 years. The ecological reconstruction measures are realized through two objective:

- biological reconstruction
- tehnico-mining fitting out
