

Researches about production capacity elements at common millet (*Panicum miliaceum* L.) cultivated in Romania

L. CREȚU - USAMV Iasi

In this paper we characterize the common millet subspecies and varieties by using the production capacity elements: the number of grains per panicle, the weight of grains per panicle and per plant, the thousand grains weight and average grain production. The researches were done at SCDA Podu Iloaiei during 2000-2002 period in a polyfactorial experiment
