

VALOAREA ALIMENTARA A PROTEINELOR DIN RAPITA FOOD VALUE OF PROTEINS Rape

LIPSA F. D., BADANI Ana-Gloria, FRIEDT W. - Universitatea "Justus von Liebig" Giessen
Germany

Oil crops are important sources of energy and protein, both for human consumption and feeding livestock. The yellow seed colour trait is of particular interest for oilseed rape breeding not only due to its association with increased oil and protein content, but also because a reduced crude fibre content after oil extraction improves the feed quality of rapeseed meal. This project aims to do a genetic and physical mapping to identify and characterise the B. napus loci for seed colour.
