

## EVALUAREA CALITATIVĂ ȘI VALORICĂ A TERENURILOR AGRICOLE PE BAZA BONITĂRII CADASTRALE A SOLURILOR Qualitative assessment and valuable LAND BASED on cadastral soil BONITĂRII

V. MOCA, O. RADU, CR. HUTANU - USAMV Iași

The evaluations of agricultural lands, as component of national landed fund, represent one of the essential indicators of knowing the qualitative and value potential of every geographical space. Therefore, it has been used marks between 0:100 points, estimated for all uses and agricultural crops, after pedological mapping and survey estimation of soil resources, organized at the level of agricultural exploitation or of administrative territory.

For getting and using of primary database of survey estimation works, have been take into study the administrative territory of Bilca, from wet pedoclimatic province. This territory has a soil mapping area of 1 358.14 ha, being located in two different geomorphologic units: Dragomirnei Plateau and Radauti Depression.

In this conditions have been identified and characterized 24 soil units (SU), on the assumption that have been delimited areas of homogeneous and ecological territories (TEO / HET). The average estimation mark for uses and representative agricultural crops from mapping territory was 24 points, which frame the area in the IV- quality class (21-30 points).
