

POMOSACROTERAPIA, ȘTIINȚĂ A MILENIULUI III POMOSACROTERAPIA, SCIENCE OF THE THIRD MILLENNIUM

GAVRILESCU Cristina Maria - UMF Iasi
CIREAȘĂ V., UNGUREANU G., ZLATI Cristina - USAMV Iasi

The natural medicine, expanding day by day, is enriched with a new science: The Pomosacroterapy. This new science appeared after collaboration between the Agricultural University and The Medical University for long time. We have managed to obtain three precious species after 30 years of research: *Prunus Avium* (the different species Cristimar), *Hippophae rhamnoides* (of the grapes of healing of de Virgin) and *Ziziphus Spina Cristi* (the Crist's thorns). These species were adapted to the microclimate from owererion and expanded on a surface of 300 hectare. The pomoefficiency high, grace to using the fruits in the pharmaceutical industry, alimentary industry, in fighting the soil's deterioration, in ecreasing the air and soil pollution. The plants bio-resistance is very high when facing the diseases and insects. The buckthorn fruits are used in curing many diseases, and thorns of *Ziziphus* are indicated in diabetes. There was selected a buckthorn type no thorns, and a poliploid biotype of *Ziziphus Spina Christi*.
