

PROIECTAREA SI REALIZAREA UNUI USCĂTOR PENTRU SEMINȚE Design and construction dryers Seeds

ȚENU I. - Universitatea Tehnică "Gh Asachi" Iași

To stock and conserve the agriculture seeds in good conditions demand to do a technological procedure for drying. To accomplish drying of the seeds it was designed a universal and modular dryer, made for agriculture farms which have store up capacities. The dryer's construction was made to can be mounted in existent space , without big investments for arrangement of it. To determine the constructive and technological parameters had been done the tests in exploitation conditions. The exploitation costs and price for product unit to dry various agriculture seeds had done according as experimental results.
