

STRATEGII PRIVIND IMPLEMENTAREA SURSELOR REGENERABILE DE ENERGIE STRATEGIES FOR IMPLEMENTATION OF RENEWABLE ENERGY

DINU Gabriela, PODANI M. - Universitatea "Valahia" Târgoviște

Numerous renewable energy resources and geothermal energy such as: hydro, aeolian, photovoltaic and gasification of the wastes have been developed in no uniformly, inadequate to the specialised efficiency. At each for these prototypes there are installations and equipment pilot and there are just few installations at many potentially beneficiaries. In this presentation, it takes into consideration the legal, economical, environmental and social strategies, which it has to consider them, in order to come out from actual vicious circle. For the moment, these aspects there are analysed sporadic and unfinished. The tacking into consideration of the enunciation ideas will be having a great effect concerning the renewable sources of energy.
