

INFLUENȚA INTERVENȚIEI ANTROPICE ASUPRA
PRODUCȚIEI ȘI CALITĂȚII PAJIȘTILOR PERMANENTE
DIN SILVOSTEPA MOLDOVEI
INFLUENCE ON PRODUCTION AND QUALITY ANTHROPIC
INTERVENTIONS PERMANENT GRASSLAND STEPPE OF
MOLDOVA

VÎNTU V., POSTOLACHE Șt. - USAMV Iasi

The permanent pasturelands from the Moldova sylvosteppe are in most part of low quality, with inadequate floristic composition, situated on soils with low natural fertility. The main ways to improve these pasturelands consist in the correction of the soil fertility, the change of the dominance in the vegetal cover and the rational use. In the paper are presented the influence of the organic and mineral fertilization on a permanent pastureland of *Festuca valesiaca* L. from the Moldova sylvosteppe.
