

RESEARCH REGARDING ATMOSPHERIC POLLUTION IN CRAIOVA TOWN CERCETARI PRIVIND POLUAREA ATMOSFERICA DIN ORASUL CRAIOVA

GAVRILESCU Elena - Universitatea din Craiova

The environment pollution represents a major preoccupation at individual, collective and global level. The degradation of life conditions caused by pollution justifies these preoccupations and makes necessary complex measures, general ones for diminishing negative side effects and to cover all areas of possible negative effects that could become a reality. Sound pollution represents a major stress factor at all level: individual, collective and global. For the present paper there were determined the main pollutants and the most important types of powders in six stations of the Craiova City. The main pollutants were: SO₂, NO₂, NH₃, and there was established the pollution level³, and there was established the pollution level.
