

CADASTRE, BASE OF LASTING DEVELOPMENT AND ENVIRONMENT PROTECTION CADASTRU, BAZA DE PROTECȚIE DURABILĂ ȘI MEDIUL DE DEZVOLTARE

Maria CONTOMAN, Alexandrina ZAHARIA, I. STANGU, O. ROMAN, M. ENACHE - "Dunarea
de Jos" University Galați

Cadastre has nowadays become a field of vital importance for long-term socioeconomic development, for the judicious and rational use of resources and for the protection of environment. Cadastre can be defined as the feedback of human actions upon environment. The interdependency of resource evidence through cadastre and their rational use in the context of long-term development at a global level imposes a new way of thinking and approaching the existing and future relationship between "Human Society" and "Environment".
