RESEARCH ON THE ROLE OF FACTORS TO PRODUCTION OF
SEEDS TO AGROFITOTEHNICI ALFALFA CULTURE
CONDITIONS OF MOLDOVA

C. SĂICU, Doina TONIGAR - SCDA Suceava

This study shows the role of the agrotechnical factors in the alfa – alfa seed production at the Agricultural Research and Development Station of Suceava . The better results were carried out when the alfa alfa culture was sowed at the beginning of the august, the distance between rows was 50 cm and the norm seed, 10-15 kg/ha. The seed yielding was obtained in the next year at the first scythe. When the sowing was made in the spring, the better yields were realized at the distances between rows of 50 cm and the norm seed of 15 kg/ha . The seed harvesting was made at the second scythe.
