

Sound pollution monitoring in Craiova city

Elena GAVRILESCU, B.F. GAVRILESCU - University of Craiova

As the 3 years (2002-2004) Craiova city area study shows, the sound pollutions sources are disperse and various from the volume point of view, witch in turn leads to a higher sound pollution level. As annual global data shows, top sound pollution records are continuously beaten for top values as well as for 80% equivalent average levels. Sound pollution became o world leading problem and governments must reassure the peoples protection against sound pollution is reinforced, this turning into a important environmental health policies.
