

Comportarea soiului de mei (PANICUM MILIACEUM L.) moldrom-1 în rețeaua I.S.T.I.S.

M. PRICOP - S.C.D.A. Podu-Iloaiei

L. CRETU - USAMV Iasi

Mariana PRICOP - Școala Generală nr. 40 Iași

During 2001-2003 the millet variety Moldrom-1 has been registered for testing to Bucharest. Testing was conducted in five places with different pedoclimatic conditions. As controls, there have been used the varieties Matador and Marte. The annual yields on the five centres have varied between means 2727.40-3919.00 kg/ha. The estimates achieved during the testing period have resulted in the variety registration on the Official List of crops varieties, Romania, Edition 2004.
