

Studiu ecologic și enzimatic asupra factorilor stationali de biotop din ecosisteme practice situate în Lunca Prutului

BIREESCU Geanina, BIREESCU L., BREABAN Iuliana, STAN Cristina Oana - Institutul de
Cercetări Biologice Iași

Are analysed main 20 ecological factors and determinants from natural Prut meadow, through specific ecological record, which mark out the fact that the majority of them are in the medium and high favourability ecological class. In the low ecological class and low favourability are: excessive and extension summer drought. The study of the soil respiration potential and enzymatic potential show mean values, which in summer season are attenuate by the negative impact of drought.
