

Valorificarea potentialului piscicol — o sansa pentru dezvoltarea rurala

Ana Maria TANASA, Andreea Iulia BURUIANA - Universitatea "Al. I. Cuza" Iași

Romania is a country with a remarkable piscicultural potential, with a valuable structure of fishes, and most of the productive domains within the piscicultural sector are based in the rural area. Therefore we think that a viable way of developing the rural area is the efficient and durable exploitation of the fish potential.

The modernization of the fish industry in the rural area will implicitly lead to an increase in income per head of population and to the presevation and development of the fish patrimony will mean the development of the rural area and, implicitly, a rise in the regional competitiveness.
