

The influence of Vinasa Rompak fertilization on the production of the temporary pasturelands cultivated in the central Moldavian Plateau

SAVA D., IONEL A., SAMUIL C. - USAMV Iasi

For bringing a contribution to clearing up the multiple aspects regarding the use of vinase as organic fertilizer, this paper analyses the influence of vinase fertilization, in different doses and associated with phosphor fertilizers on the production of the temporary pasturelands based on perenne graminees and some mixtures of graminees and perenne leguminous plants.
