During 2001-2002 at the Agricultural Research and Development Station of Podu Iloaiei, new lines of French and kidney beans have been tested in new orientation comparative crops: these new lines were obtained by individual selection from "Galbenă de Moldova" variety. Lines stood out by great yields of pods, superior as quality to the control.

As concerns pods yield, L.3/98 and L. 5/99 proved to be long-term lines.
