

Noi micromicete parazite si saprofite pe plantele horticole cultivate in Moldova

Viorica IACOB, E. ULEA, I. DROBOTA, O. OSTAFI - USAMV Iași

As a result of the mycological researches during 2004-2005, the authors pointed out, on different cultivated plants, fruit trees and trees, new micromycetes for Romania, new host-plants for already known micromycetes or rarely described micromycetes in Moldavia

The authors studied the frequency of the pathogenical agents on the cultivated plants, on the flowers cultivated in green houses, on trees and ornamental bushes or on weeds from cultures, reporting 2 new micromycetes for Romania, 2 new micromycetes for the central part of Moldavia and 2 new host-plants for already known micromycetes.
