

Monitorizarea daunatorului EURYGASTER SPP. in anul agricol 2005 - 2006, pe raza jud. Timis

Lavinia MICU, D. PETANEC, Snejana DAMIANOV, Gh. SIMERIA, Cristina ZEPA - USAMVB
Timișoara

În the paper realization having in view, the soundings effected in the wheat crops in the april - july months of the year 2005, in the reference regions of Timiș district, also the soundings effected in forests for the density determination of hibernated exemples and of the biological reserve in the spring of year 2006.

On base of those observations will be made the prognose and the warning for the year 2006.

In the district Timiș the Eurygaster spp. produce wheat the biggest quantitative and qualitative losses.

Thauks to the special weather conditions from the last years, the observations concerning the Eurygaster spp. attack have an important role for the preventing and the control in time of that pest.
