

Influenta fertilizării și a modului de folosire asupra biodiversității asociațiilor de festucetum valesiacae din silvostepa Moldovei

Șt. POSTOLACHE - USAMV Iași

The Festucetum valesiacae associations from the Moldova sylvesteppe are in most part of low quality, with inadequate floristic composition, situated on soils with low natural fertility. The main ways to improve these grasslands consist in the correction of the soil fertility with mineral and organic fertilizers, the change of the dominance in the vegetal cover by different types of use. In the paper are presented the influence of the organic and mineral fertilization and the type of use on a permanent grasslands of Festuca valesiaca L. from the Moldova sylvesteppe.
