

Tehnologii de fabricare a produselor conservate din leguminoase cu conținut sporit în proteine

Liudmila LINDA Diana NICOLAEVA, Marina PODOGOVA, E. IORGA, Vera JUC - Institutul de
Tehnologii Alimentară Republica Moldova

In the most modern diets, protein is the most deficient and expensive ingredient. In conditions of global deficit of protein, cereal-leguminous play the relevant role. Kidney bean, chick-pea, please, soya, lentil, beans etc. are referred to cereal-leguminous, growing and cultivated for a long time in Moldova. ICSPTIA performed the analysis of toned up and perspective sorts of cereal-leguminous cultures of local and foreign selection, developed receipts of new types of preserves considering features of national cuisine of Moldova with the increased content of vegetative protein, stated their nutritive and energetic value, technologies are adapted to conditions of industrial processing by enterprises.
