

Implementarea managementului integrat al daunatorilor (IPM) în ecosisteme, sistemul educațional și comunități

V. BRUDEA - Facultatea de Silvicultură Suceava

Maintaining environmental biodiversity, sustainable management of agricultural and forest ecosystems require implementation of integrated pest management (IPM) or of good management practices. The paper realised a critical analyzing concerning strategies of IPM implementation at the managers level, education level, and even the communities level. Researches extension and education will be performed by developing of IPM www site on agricultural and forest pests, for a free information flux to specialists, managers and information desires. Also, it must take governmental measures to keep clean forest ecosystems and to increase ecological agriculture surfaces by introduction of bio rational products in IPM.
