The surface cultivated with vegetables in Romania decreased with 20 % in 2004 comparing to the year 1989.

The cultivated surface and the total medium production of vegetables had a fluctuating evolution during the above mentioned period.

In the context of integration in the European Union, there are necessary the following measures: increasing of the efficiency on hectare for ensuring of a vegetable offer from autochthonous production of 3,7 millions tones, with an efficiency of 17,9 t/ha; extension of new methods of culture for the ecological production of vegetables; durable exploitation of natural resources (soil, water, environment protection); setting up of managerial medium and big family farms, with a surface over 100 hectares; integration of different sectors for labour of the European norms and regulations in the Romanian legislation. conscription in farms of vegetables; implementation of HACCP system for ensuring the quality of products; correlation between the legal and the institutional frame through transposing
