

## Influenta îngrășamintelor chimice asupra producției la rapita de primăvară (*Brassica napus* l. ssp. *oleifera* dc)

Florica MORAR - Grupul Școlar Agricol Tg. Mureș  
I. OROIAN, Justina LOBONTIU - S.C.D.C.B. Tg. Mureș

It is well known that Oil Rape Crops need rich soils or a good fertilization mostly by chemical fertilizers. There were many research works on organic fertilizations and their influence on yields and intake in the plant itself of N,D,K,Ca,S .s.a. In the trials carried out at SCPCB Singiorgiu de Mures by the year 2005, the assessments and yields and some of their qualities, for two cultivars: Bolero and Heros, allow us to conclude.
