

Congelarea produselor agricole granulare de la tradiție la noi perspective

Mihaela Gabriela CHIRILA, I. TOFAN - Universitatea "Dunărea de Jos" Galați

The frozen food industry is highly based in modern science and technology. Starting with the first historical development in freezing preservation of foods, today, a combination of several factors influences the commercialization and usage of freezing technology. The future growth of frozen foods will mostly be affected by economical and technological factors. Growth in population, personal incomes, relative cost of other forms of foods, changes in tastes and preferences, and technological advances in freezing methods are some of the factors concerned with the future of freezing technology.
