

## Evidenta la nivelul exploatației agricole - o necesitate?

Camelia APETROAIE - Oficiul Județean de Consultanță Agricolă Iași

The study analyses the necessity and the opportunity of the primary evidence in individual agricultural exploitations, from the point of view of different aspects and programs of rural financing.

The facts are based on real results obtained in 2006 in Iași County in our consultancy activity regarding the support given to the agricultural producers for accessing SAPARD, The Farmer Program and different credit funds. This support has been achieved by elaborating some reports and economical analysis for the possible beneficiaries and by presenting these reports to the commercial banks.

There have been found some difficulties that agricultural producers faced in obtaining credits for developing business in rural area, especially the lack of primary evidence of the exploitation.

There has been emphasized, as well, the collaboration with Rural Finance Development Program initiated by United States Agency for International Development, regarding the promotion of the standardized form with agricultural Register.
