

Aspecte privind poluarea radioactivă a haldelor de steril din cariera Husnicioara, județul Mehedinți

M. SUSINSKI, R. MOCANU, C. BECHERESCU, Ana Maria DODOCIOIU - Universitatea din
Craiova

There have been determined the radioactive activity of the sterile material from the Husnicioara quarry, District Mehedinți as well as of the nearby soils. The total average activity was of 550 Bq/kg for the sterile material and 600 Bq/kg for the nearby soils. These values are among the natural limits for soils.
