

## The evolution of some ROMANIA\'S IT&C indicators comparing to other european countries

A. BANES - USAMVB Timisoara

In June 2005, the European Commission set out a new strategic framework for the Information Society, i2010. This report provides the first overview of the state of the Information Society since i2010 was adopted and a check on progress since the launch of eEurope 2005 in 2003.

The report is largely based on the 2004 surveys of Households and Enterprises that were developed by Eurostat and the National Statistical Institutes of the EU Member States. The report covers the whole EU25 plus the candidate and EEA countries.

The present paper presents data of Telecommunications Infrastructure, computer and Internet usage in urban and rural settlements, e-education, e-government, enterprises, IT usage, and e-commerce and why a lot of people don't access the Internet.
