

## La matiere organique dans les sols des regions septentrionales de la Republique Tcheque

J. RZONCA - Agresearch Rapotín Víkyně, Czech Republic  
M. SVOZILOVA, P. MICOVA - Research Institute for Cattle Breeding Víkyně, Czech Republic

This study deals with observing of basic parameters of soil organic matter in less favorable areas in north regions of Czech Republic, in condition with the ecological and conventional farming system on the soil. The aim of this work was to consider keeping sustainable agro ecosystems. The observation was done in the years 2004 - 2006 in two model sites in marginal areas of north-east Bohemia and north-west Moravia. The results affirmed sustainability also of conventional farming system on the soil.
